

Task 1 – recapping terminal commands

Command	Explanation
pwd	Outputs to the console what the current directory the terminal is working in
ls	Lists files in the directory
Cd directory_name	sets the working directory to the directory name
Cd ..	sets the working directory up by one. For example if you are in /home/freddie and then you do cd .. then you would be in /home
Cd -	Sets the working directory to the users home directory
Mkdir directory_name	Makes a folder called the name which is given
Touch filename	Makes an empty file called filename
Git status	Displays info about the local repository. For example, what branch the folder is on and if it is up to date or not. Also the changes that are staged to commit or added to the commit.
Git add -A	Stages all of the changes from the whole tree
Git commit -m ""	Creates a commit with the staged changes with the message ""
Git push	Pushes the commit onto the remote repository from your local repository – updating the remote repository
Git pull	Pulls the latest commit from the remote repository – causing your local repository to update to the remote repo

Task 3 – exam style questions

State two advantages of using version control when writing software:

One advantage about using version control is that it allows a programmer to roll back to earlier versions if they were to accidentally break something in their code later on.

Another advantage of using version control is that it allows teams to work at the same time and then merge all of their versions together once they are done.

State one disadvantage of Git.

One disadvantage of Git is that it has a hard learning curve, this means that it takes a while to get used to how git works however in the long term it pays off to have a robust system which handles version control.
